Treasure Data Coding Test

Your task is to write an API backend for a social recipe website. You do not need to write a frontend website, but you should write tests for the API.

Requirements

- Add, edit, list, show and delete Recipes
- Recipes need to have descriptions, ingredients, a process and an author
- The API should be able to return the measurements in either Imperial or Metric format as requested by the caller
- Recipes can be rated by other users and you should be able to see who has rated them

Implementation

- Your solution should be written in Ruby
- Choice of API framework (if any) is up to you

Timescales

- Please spend a maximum of 2 hours on a solution that you are proud of
- The majority of candidates submit a solution within one week. If you need longer due to other commitments that's ok - just check in with us regularly so we know you're still interested in the role.

Delivery

- Please upload your submission to GitHub or send us your source code as a zip file
